

Qik Patch is an innovative solution that provides a fast and simple way of repairing a hole in a chute, bin etc. without the need for any specialist tools or equipment.

Qik Patch consists of ultra strong magnets that have been embedded in a high wearing polymer matrix. Additionally, Qik Patch features a reflective rope handle that assists with its installation and removal.

With no requirement for special permits, the Qik Patch is simply placed over the hole (damaged area) to prevent further material spillage. While Qik Patch provides a superior wear barrier, it is flexible enough to conform around any protruding edges around the hole.

This Qik Patch will allow for machinery to continue operating until the next shut down when a more permanent repair can be carried out. Qik Patch is available in a range of sizes and colours (red, orange and green).

Key Features

- Simple and easy to use
- Allows for a quick repair
- No specialist tools
- No permits required
- Reflective handle for night work
